MODEL: GR-1100EX

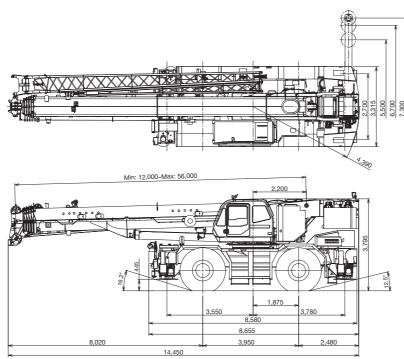

SPECIFICATIONS

SPECIFICATIONS	140,000 0.5
MAXIMUM CAPACITY	110,000 kg at 2.5 m
PERFORMANCE	
Max. traveling speed	19 km/h
Gradeability (tan θ)	84% (at stall), 30%*
	* Machine should be operated within limit of engine
	crackcase design. (17°: MITSUBISHI 6M60-TLU3R)
WEIGHT	
Gross vehicle mass	55,474 kg
-1st axle	27,775 kg
-2nd axle	27,699 kg
MIN. TURNING RADIUS	2-wheel steer: 11.9 m
	4-wheel steer: 6.8 m
	(at center of extreme outer tire)
BOOM	6-section extended by single telescoping cylinder.
Fully retracted length	12.0 m
Fully extended length	56.0 m
Extension speed	44.0 m in 340 s
Angle	-1.5°–81°
Elevation speed	20° to 60° in 40 s
JIB	2 stage bi-fold lattice type;
	Single sheave at the head of both jib sections.
Offset	3.5°, 25° or 45°
Length	10.1 m, 17.7 m
MAIN WINCH	Variable speed type with grooved drum driven by
	hydraulic axial piston motor.
Single line pull	9,900 kgf
Single line speed	136 m/min. (at the 4th layer)
Wire rope	19 mm x 300 m (Diameter x length)
AUXILIARY WINCH	Variable speed type with grooved drum driven by
	hydraulic axial piston motor.
Single line pull	9,900 kgf
Single line speed	117 m/min. (at the 2nd layer)
Wire rope	19 mm x 158 m (Diameter x length)
SLEWING	4.5.01.4.6.00
Slewing speed	1.5 min ⁻¹ {rpm}
Tail slewing radius	4,390 mm
HYDRAULIC SYSTEM	Pumps 2 variable piston pumps for crane functions.
	Tandem gear pump for steering, slewing
	and optional equipment.
	Control valves
	Multiple valves actuated by pilot pressure
	with integral pressure relief valves.
	Reservoir 763 lit. capacity. External sight
	level gauge.
	Oil cooler Air cooled fan type.

TADANO Automatic Moment limiter (TADANO AML-C) (TAD		
OUTRIGGERS 4 hydraulic, beam and jack outriggers. Vertical jack cylinders equipped with integral holding valve. Each outrigger beam and jack is controlled independently from cab. Extension width Max 7,300 mm, Mid 5,500 mm & 6,700 mm, Min 2,700 mm, Float size (Diameter) 600 mm CARRIER Rear engine, left-hand steering, driving axle 2-way selected type by manual switch. 4 x 2 front drive, 4 x 4 front and rear drive. ENGINE Model MITSUBISHI 6M60-TLU3R Type 4-cycle, turbo charged and after cooled, direct injection diesel. Piston displacement 7.54 liters Bore x stroke 118 mm x 115 mm Max. output Gross 200 kW at 2,600 min ⁻¹ {rpm} Max. torque 785 N-m at 1,400 min ⁻¹ {rpm} TRANSMISSION Electronically controlled full automatic transmission. STEERING Hydraulic power steering controlled by steering wheel. 4 steering modes available: 2-wheel front, 2-wheel rear, 4-wheel coordinated and 4 wheel crab Front: Rigid mounted to frame. Rear : Pivot mounted with hydraulic lockout device.	Moment limiter	visual pre-warning Boom position indicator Outrigger state indicator Boom angle / boom length / jib offset angle / jib length / load radius / rated lifting capacities / actual loads read out Ratio of actual load moment to rated load moment indication Automatic speed reduction and slow stop function on boom elevation and slewing Working condition register switch Load radius / boom angle / tip height / slewing range preset function External warning lamp Tare function Fuel consumption monitor Main winch / auxiliarly winch select Drum rotation indicator (audible and visible type)
Extension width Max 7,300 mm, Mid 5,500 mm & 6,700 mm, Min 2,700 mm, Float size (Diameter) 600 mm CARRIER Rear engine, left-hand steering, driving axle 2-way selected type by manual switch. 4 x 2 front drive, 4 x 4 front and rear drive. Model MITSUBISHI 6M60-TLU3R Type 4-cycle, turbo charged and after cooled, direct injection diesel. Piston displacement 7.54 liters Bore x stroke 118 mm x 115 mm Max. output Gross 200 kW at 2,600 min¹ {rpm} Max. torque 785 N•m at 1,400 min¹ {rpm} TRANSMISSION Electronically controlled full automatic transmission. Lifting your dreams

ROUGH TERRAIN CRANE

GR-1100EX

Compact Rough Terrain Crane with Improved Work Capacity

The GR-1100EX is a new, state-of-the-art crane with the largest lifting capacity among Tadano's two-axle rough terrain models. The crane sits on a compact two-axle carrier and comes with the longest boom of all Tadano's two-axle rough terrain cranes. It offers compactness—almost as small as the existing 100-ton-class rough terrain model—and is especially easy to transport. The new crane design provides improved safety, greater work efficiency, environmental considerations and exceptional quality. This new, next-generation crane is ready to work for you.

Equipped with Satellite/Mobile Communications and Environmentally Friendly Features

HELLO-NET

Hello-Net allows you to monitor crane activity directly from your computer or mobile device and is connected through satellite or mobile communications. It provides advanced customer support capability by providing operational information as well as the ability to manage inspection and maintenance schedules.

Note: HELLO-NET availablity varies by country.

For detail, please contact your distributor or our sales staff in charge

Eco mode

The Eco Mode System controls the maximum engine speed during crane operation. The system will reduce any unnecessary rise in engine speed when there is excessive acceleration and allow fuel consumption and CO2 emissions to be reduced by a maximum 22% with Eco Mode 1, and maximum 30% with Eco Mode II. This also results in reduced noise levels.

Eco mode switch

Positive control

The Positive Control System effectively controls the hydraulic pump discharge during crane operation in direct response to the amount of movement applied by the operating control lever.

Keeping the quantity of hydraulic pump discharge to a minimum, helps to reduce fuel consumption and CO2 emissions by up to 20%.

Fuel monitoring

The Fuel Monitoring System constantly monitors and displays fuel consumption conditions on the AML screen. Monitoring the screen indicator enables the operator to prevent wasteful acceleration and idling.

1 GR-1100EX GR-1100EX 2

Crane

The rounded boom is made of high tensile steel, which allows for decreased boom weight as well as increased boom strength. In addition, the high-performance AML-C ensures operational safety.

Single telescopic cylinder

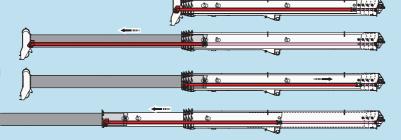

6 box type sections consisting of 1 base section and 5 telescopic sections are extended by a single telescopic cylinder. All sections are fully extended/retracted automatically and locked in the selected working position.

Ultimate boom for rough terrain crane

The rounded boom constructed of high tensile steel contributes to decreased boom weight and increased boom strength.

Outline of telescoping mode

Boom telescoping of the crane is performed with one telescoping cylinder. Each telescopic section is extended and fixed with pins in sequence from the top with several telescoping modes based on the designated job plan.

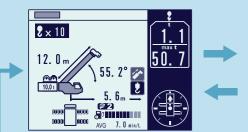

Display telescoping status

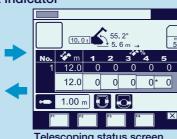

The cylinder and each boom section's conditions are displayed on the AML using the Telescoping monitor switch.

Telescoping status indicator AML displays load moment indicator

Telescoping menu screen

Two winches with cable follower

Both the main winch and the auxiliary winch with powerful line pull operate at high speeds, serving to enhance work efficiency.

*Maximum permissible line pull may be affected by wire rope strength.

New crane structure

When developing the crane structure, importance was attached to the shape that is best suited for crane operation.

FEM analysis was used to create the design. It was also important that the slewing structure be true to Tadano's original concept and be both rigid and compact while maintaining a desirable overall height.

*FEM: Finite Element Method

Assist cylinder for jib

When mounting and stowing the jib, an assist cylinder ensures effective operation by increasing the work efficiency of jib mounting and storage.

Bi-fold jib

A two-stage, bi-fold lattice-type jib can be offset at 3.5°, 25°, and 45° to enable the crane to carry out jobs that require extra reaching ability.

10.1 m, 17.7 m

3.5°

25°

45°

Longest boom and Improved capacity 12.0 m-56.0 m

Operator comfort

The crane cab provides improved livability and offers the operator a more comfortable working environment.

The control levers are smooth and responsive to the operators touch.

Tiltable cab

You can operate the crane comfortably by tilting the cab during high hoisting operations such as lifting with the jib. The cab tilting angle is between 0° and 15°.

Cab tilt indicator and switch

3 GR-1100EX GR-1100EX 4

Automatic moment limiter [AML-C]

Tadano's new AML-C is easy to use. It allows the operator to simultaneously monitor; boom angle, boom length, operating pressure of the elevating cylinder, the extension width of outriggers, slewing position, rated lifting capacity and present hook load. changes without changing configurations and codes to make a lift.

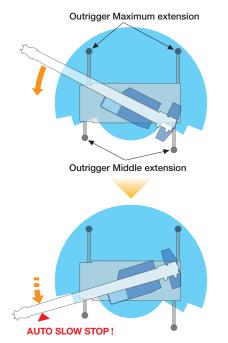

The AML-C provides both audio and visual warnings when a condition exists that will overload the crane and automatically employs our slow stop function to avoid shock loads.

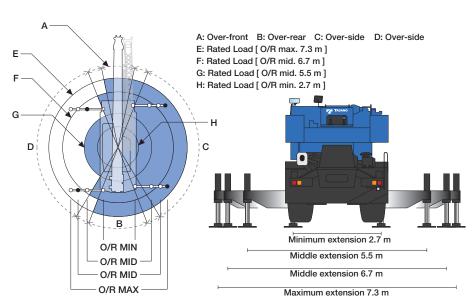

The AML-C with "OPERATOR" pre-set working range limits and automatic slow stop functions will assist the operator to deliver safe smooth

Control of asymmetric extension width of outriggers

When operating the crane with the asymmetric outriggers extended, the AML-C detects the extension width of all of the crane's outriggers (front, rear, left and right) to measure maximum work capacity in each area. When slewing the boom from the longer outrigger area to the shorter outrigger area, the AML-C detects the motion and displays the maximum capacity according to the extension width of each of the outriggers, and brings the motion to a slow stop before it reaches the maximum capacity. Regardless of operator awareness, the AML-C's slow stop function will help to minimize any safety risk.

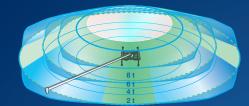

SMART CHART Smart Chart system The poully devoted 6

The newly developed Smart Chart expands the working area, allowing you to get the best crane performance in any outrigger extension setup.

In the case of GR-1100EX

Main Boom: 56.0 m **Outrigger: Maximum extension**

An example of effects with the Smart Chart (Comparison with conventional control)

Load radius

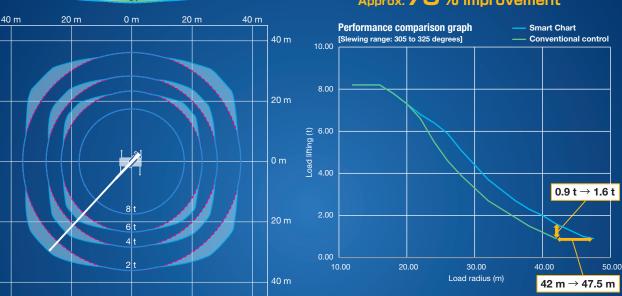

42 m - 47.5 m

Approx. 13% expansion

Load lifting capacity

 $0.9 t \rightarrow 1.6 t$

Approx. 78% improvement

New working area Smart Chart creates for you.

In maximum outrigger extension setups

The Smart Chart taps the potential of a crane by expanding the conventional circular working area into a square one, improving work safety and efficiency.

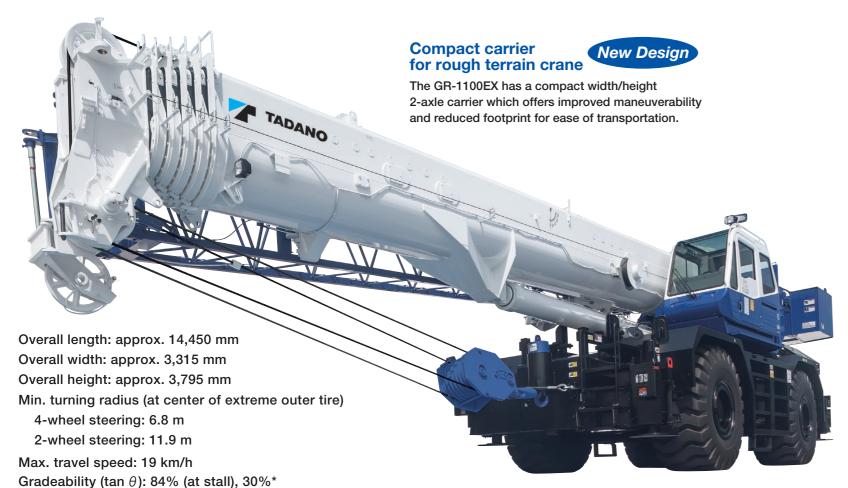

In asymmetrical outrigger extension setups

In a site where all outriggers cannot be extended fully, the Smart Chart always draws out maximum work performance to support your job.

Even in a work site where space is limited, the Smart Chart provides a safe and comfortable work environment.

5 GR-1100EX GR-1100EX 6

Carrier

* Machine should be operated within the limit of engine crankcase design (17°: MITSUBISHI 6M60-TLU3R)

Highly Maneuverable Compact Carrier

The GR-1100EX features a compact carrier that is nearly the same size as Tadano's smaller capacity GR-800EX. Its compactness makes the GR-1100EX both highly maneuverable and easy to transport.

High performance engine

MITSUBISHI 6M60-TL 4-cycle, turbo charged and after cooled, direct injection diesel engine.

Max. output: 200 kW at 2,600 min⁻¹ {rpm} Max. torque: 785 N-m at 1,400 min⁻¹ {rpm}

New carrier frame

The carrier frame was developed and built to be a light weight and highly rigid structure that achieves an advanced level of performance.

The results produce a highly stable and maneuverable crane.

Counterweight is hydraulically mounted and dismounted; in addition, dismounted counterweights can be lifted and moved for transport, and then remounted for operation at a work site without a helper crane.

Counterweight mounting/dismounting remote controller
