- NOTE : 1. Empty Chassis Rated Capacities in these tables depend on condition that crane is set level on firm level ground.
 - 2. This value includes the mass of lifting devices such as hook block (30kg).
 - 3. When the outriggers are extended to the middle width, read the capacities rated for the minimum extension width.
 - 4. Fully extend the front outriggers when working with a boom length exceeding 5.57m.
 - 5. This load radius shows actual load radius which includes boom deflection.
 - 6. If the boom length exceeds the table value even a little, the performance is limited to the performance of the next boom length.
 - 7. When the boom length is 7.78 m, a half of the *□* mark on lateral face of the 3rd boom section is exposed out of 2nd boom section.
 - 8. Empty chassis rated lifting capacity varies according to the working area.
 - Front mounting <over-side, over-rear area> : 100%

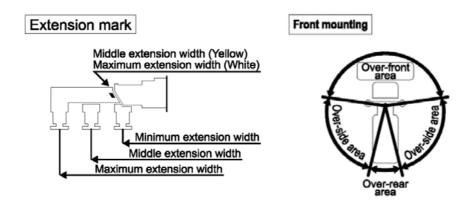

<over-front area> : 25%

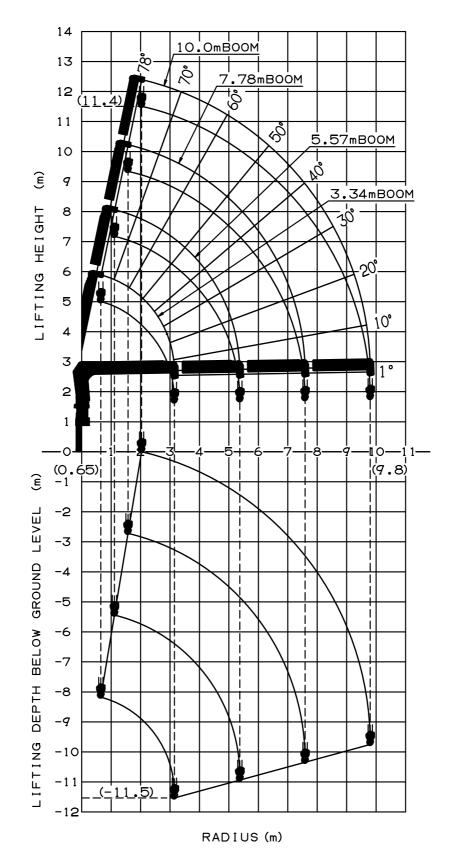

9. Empty Chassis Rated Capacities table A,C and D depend on the types of chassis.

(The following table shows guidelines for bodywork vehicles that can achieve the rated lifting capacity tables A and C for vehicles. The rated lifting capacity may not be applicable depending on vehicle specifications. Be sure to carry out a stability inspection to determine which rated lifting capacity tables to apply.)

А	8.0 t ≤ GVW < 17.0 t	
С	11.0 t ≤ GVW <17.0t,	4200 mm ≤ WB (*1)

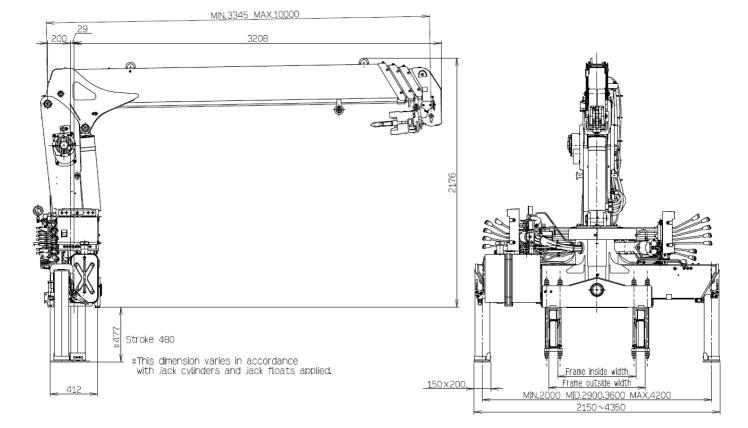

*1 : From the front axle to the farthest rear axle.

WORKING RANGE

NOTE : The above lifting heights and boom angles are based on a straight (unladen) boom, and allowance should be made for boom deflection obtained under laden conditions.
