- NOTE :
1. Rated capacity indicator issues warning with the limit warning lamp and the buzzer when the working state approaches limit or the strength limit.
 2. When the AML is equipped with the rated capacity limiter, an operation stops automatically if the rated lifting capacity is exceeded.
 3. When the crane is front mounted, set up the front outriggers so that the front wheels are slightly in contact with the ground. (If tire deformation is large, AML may activate earlier.)
 4. Empty Chassis Rated Capacities in these tables depend on condition that crane is set level on firm level ground.
 5. This value includes the mass of lifting devices such as hook block (45kg).
 6. When the outriggers are extended to the middle width, read the capacities rated for the minimum extension width.
 7. This load radius shows actual load radius which includes boom deflection.
 8. Rated lifting capacity is in consideration of the loading on the truck bed, and is within the range from the empty chassis rated lifting capacity to the crane strength rated lifting capacity.
 9. If the boom length exceeds the table value even a little, the performance is limited to the performance of the next boom length.
 10. When the boom length is 10.97 m, a half of the  mark on lateral face of the 4th boom section is exposed out of 3rd boom section.
 11. Empty chassis rated lifting capacity varies according to the working area.
 - Front mounting <over-side, over-rear area> : 100%
<over-front area> : 25% (*1) or 60% (*1) or 100% (*1)
 - Rear mounting <over-front, over-rear area> : 100%
<over-side area> : 30%

*1 : Depend on the types of chassis.
 12. Empty Chassis Rated Capacities table A, B, C and D depend on the types of chassis.
(The following table shows guidelines for bodywork vehicles that can achieve the rated lifting capacity tables A, B, C and D for vehicles. Be sure to carry out a stability inspection to determine which performance to apply.)

A	15 t ≤ GVW, 2.9 t ≤ CAWf (*2)
B	25 t ≤ GVW, 3.8 t ≤ CAWf (*2)
C	25 t ≤ GVW, 4.4 t ≤ CAWf (*2)
D	25 t ≤ GVW, 4.7 t ≤ CAWf (*2)

*2 : Chassis front axle weight (excluding crane and mounting parts mass).

WORKING RANGE

NOTE : The above lifting heights and boom angles are based on a straight (unladen) boom, and allowance should be made for boom deflection obtained under laden conditions.
